

# Intravital Microscopy of Microfoam Injected into Rat Cremaster Microvasculature

**Air-Based Polidocanol Foam  
(Tessari Method)**

Still photo of air-based foam bubbles lodged in arterioles; no change over 30 minutes

**“OLD” Microfoam  
7% nitrogen**

Video-frame capture of proprietary microbubbles which were much smaller and did not obstruct arterioles

**“NEW” Microfoam  
0.01-0.8% nitrogen**

Video-frame capture of bubbles only visible with image enhancement; did not obstruct arterioles
